

Case Study

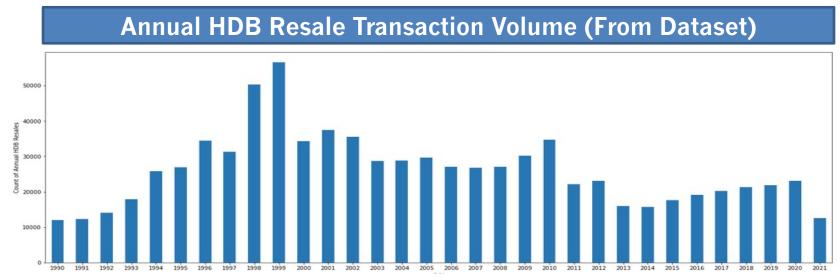

HDB Resale Price Estimator

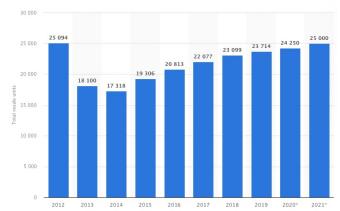

BACKGROUND INFORMATION - RESALE VOLUME

> HDB dataset given shows at least 10k HDB resale transactions per annum, and external sources show in recent years this number goes past 20k.

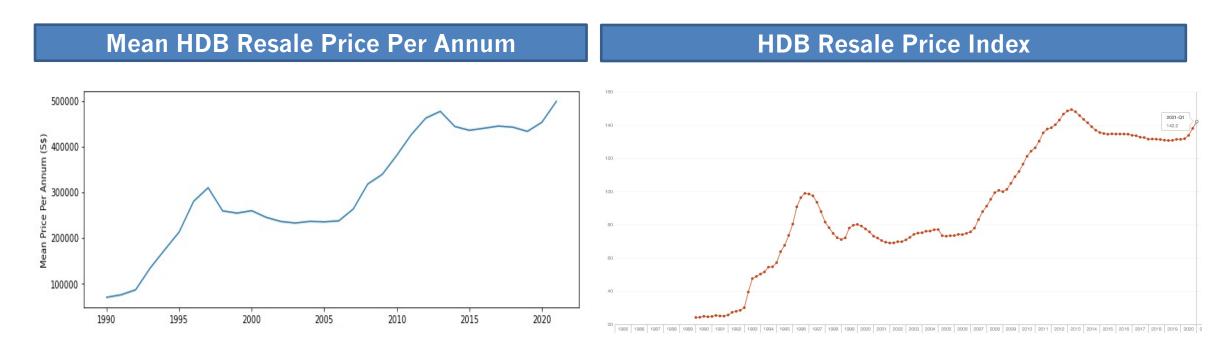

HDB Resale Estimates

BACKGROUND INFORMATION – RESALE PRICE

- > HDB resale prices have remained buoyant since its conception
- > One of the reasons for the resilience of the public housing market is it is a basic necessity and the most affordable type of housing in Singapore.
- > Demand for public housing is unlikely to evaporate even during economic downturns.

BACKGROUND INFO – MOST EXPENSIVE NEIGHBOURHOODS Institute of Data

BACKGROUND INFO – MOST EXPENSIVE FLAT TYPE

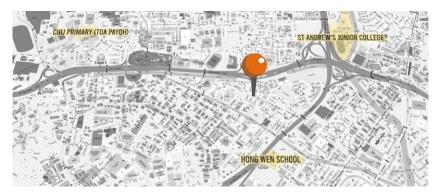

BACKGROUND INFO MOST EXPENSIVE FLAT SOLD IN HDB HISTORY

Predictor Features	Characteristic
Town	Kallang/Whampoah
Flat Type	3 room
Block	39
Street Name	JIn Bahagia
Storey Range	01 to 03
Flat Model	Terrace
Lease Commence Date	1972
Remaining Lease	49
Floor Area Sqft	2,260
Resale Price (S\$ M)	1.268

Additional search shows that the apartment was remodelled 10 years ago and now has 4bedrooms and 2 bathrooms and is surrounded by parks and greenspace and in close proximity to a popular hawker centre and market, "Whampoah Market".

BACKGROUND INFORMATION – GOVT REGULATION

The ownership and transaction of HDB flats are regulated. Only Singaporeans and permanent residents can own HDB flats. Each resident household can own only one HDB flat, which will be their primary place of residence. Each flat owner must live in his flat for a minimum of five years before he can sell the flat.

➤ There are other rules and regulations to ensure that HDB flats are treated as a home rather than a trading asset, which contribute to its price stability.

BUSINESS PROBLEM

At least 80% of Singaporean resident population live in HDB's, of which 90% own their own homes (HDB.gov.sg). So it is very likely that most Singaporeans either are current homeowners or are on the market to purchase a HDB.

But due to government regulation, the public housing market is not as liquid as the private housing market, so most consumers have little knowledge on the market.

Homeowners and buyers often rely on the expertise of real estate agents that specialize in the HDB sector and have the potential to "go in blind" without fully understanding the worth of the asset in question.

We propose a data driven approach for homeowners and potential buyers to better understand the market and use this tool as a point of negotiation to value this asset class.

THE DATASET

- ➤ Given 5 datasets with information on HDB resale transaction information from 1990 to 2020 were merged
- > Around 25k duplicate entries were removed
- > Final dataset is 834,508 entries with 11 feature columns

MODEL

LINEAR RELATIONSHIP IDENTIFIED

FEATURE SELECTION (SIMPLE LR)

> Floor area by sqft picked as predictor for simple LR

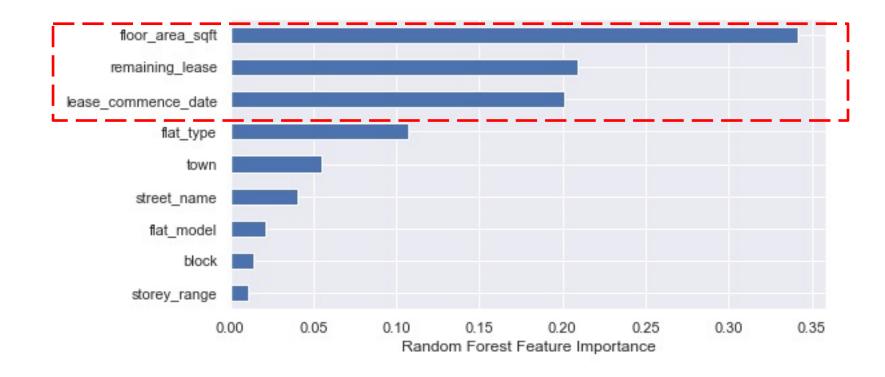

Triangle Correlation Heatmap

MULTI-FEATURE SELECTION

> Top 3 features by RandomForest picked.

Source: HDB Dataset

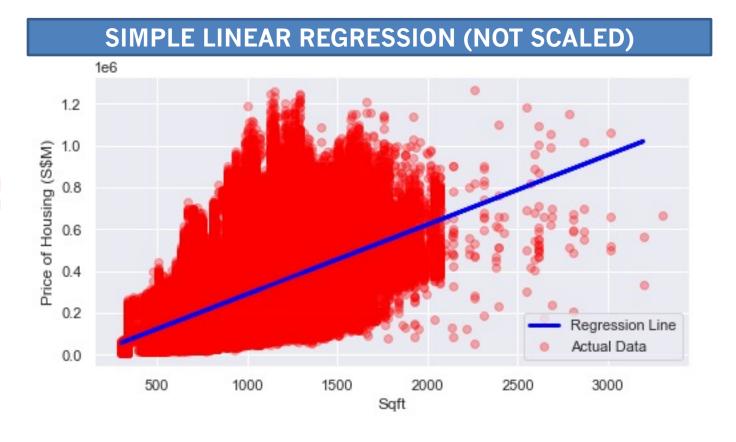

Notes: RandomForest was used as it can handle both continuous and categorical data at ease

MODEL SELECTION

> Selected model can can predict price with an upper/lower bound of \$24,182 (8% of mean price)

Model Type	Features	R2	RMSE (S\$)
Simple LR (Not Scaled)	1	0.38	119,710
Simple LR (Scaled)	1	0.38	119,513
Multi LR (Scaled)	9	0.66	88,307
RFR	9	0.97	24,182
RRR	3	0.89	49,880

PREDICTION TESTING

➤ Price predicted in prediction testing was 14% over actual data

Predictor Features	Characteristic	town flat_type block street_name storey_range flat_model lease_commence_date remaining_lease floor_area_sqft price_psqft resale_price
Town	Tampines	2020-09-01 18 5 944 196 0 7 20 66 1657.6406 446.417637 740000.0
Flat Type	Executive	In [132]: 1 RFR.predict(x_pred) #- predicted price is SGD 850k. 14% higher than actual value of S\$740k

Floor Area Sqft	1,657	

IMPROVEMENTS

IMPROVEMENTS FOR FUTURE

- > Descriptive stats could have been done on only last 1,3,5 year historical results
- > Could do comparison with Singapore private residential market
- > More work needs to be done on feature engineering to try and create new features. Price psf imputed from target variable too simplistic
- > Could include geospatial data as a new feature and identify proximity to CBD, public transport, schools as these could possible increase asset valuations

Thank you
